Criteria C1

Global IUCN Red List Category —

Criteria —

Hieraaetus fasciatus is a patchily distributed resident in southern Europe, which accounts for less than a quarter of its global range. Its European breeding population is very small (as few as 920 pairs), and declined substantially between 1970–1990. Although some populations were stable during 1990–2000, the species continued to decline in its Spanish stronghold, and declined overall at a rate that—on top of earlier declines—equates to a large decline (>20%) over two generations. As a consequence of this decline and its very small population, it is evaluated as Endangered.
